

14. Rewinding. At the end of the film allow all of it to pass onto the take-up spool before stopping the projector. Then lead the film over the rewind film guide above the lamp-house, and feed into the core of the empty spool. Switch to Reverse projection (motor only) until all the film has been rewound.

15. Projection Lamp. Use only 8VP 8 Volt 50 Watt lamp. (A1 / 185 OR KP-GT). To replace lamp remove lamphouse cover by pulling towards you. Press down old lamp, twist anti-clockwise and lift out (Caution-it may be HOT). Press new lamp into socket and lock into position by turning it clockwise as far as it will go — the special lamp base ensures that it can only be inserted the correct way
